Trust in colleges decaying over AI cheating

Administrators and students clash over monitoring policies and false accusations.

By JAWEED KALEEM

A cheating crisis is growing at American universities as AI rapidly becomes embedded in learning: Extreme and uneven classroom practices are in force to prevent deception, false accusations against students are increasing and the definition of what it means to cheat is shifting, professors, students and specialists in academic integrity say.

At UCLA, students in a recent sociology class said they were told in an email to “procure a mirror large enough to fully reflect your entire desk-area work space,” and turn on their laptop camera so the professor could watch them during an online test. In another course, students said they had to take their oral video exam with their arms crossed in front of them or behind their heads so they couldn’t type into AI platforms.

A Los Angeles attorney who represents students under disciplinary proceedings at California colleges said AI accusations now make up roughly 35% of her firm’s education caseload and are increasing rapidly. She has seen multiple cases in which professors report more than half a class for AI violations.

Complicating it all: Defining cheating these days can be murky with rules about AI use varying widely as instructors strive to redesign the classroom experience. Some faculty allow students to cite AI sources in drafts. On the other end, the UC Berkeley law school last month instituted a ban on nearly all AI use.

Ambiguity and contradictions, higher education experts say, are at the heart of the conflict at many campuses where AI policy is left to individual instructors seeking to encourage its ethical use while preserving academic integrity — as the technology evolves faster than university rules.

“It’s a messy environment,” said Lee Rainie, who directs Elon University’s Imagining the Digital Future Center. The underlying issue is trust, he said.

“There’s a sense that stu- [See **AI cheating**, A7]

‘Life-affirming’ advance for at-risk diabetes patients

With grant, hospital transforms care, reducing amputations to zero

By CORINNE PURTILL

CHRISTINA HOUSE Los Angeles Times

PATIENT Michelle Caldwell, 58, is examined by Dr. Edward Cardenas at an MLK clinic in East Compton.

More than three decades after a diagnosis of Type 2 diabetes, Michelle Caldwell says her disease is better controlled than ever.

She keeps regular appointments with her endocrinologist, primary care provider, dietician and pharmacist at MLK Community Medical Group, the outpatient arm of MLK Community Healthcare.

She picks up weekly produce deliveries at the South Los Angeles hospital’s cafeteria and attends its occasional cooking classes. She has learned to decode nutrition labels and developed a taste for salads and nuts.

Just one hurdle remains: the shoes.

Diabetes can damage foot nerves, making it easier for patients to miss small scratches and wounds that [See **Diabetes**, A11]

Meet soccer’s Jewish innovators

Historical exhibit kicks off Holocaust Museum LA

By KEVIN BAXTER

Béla Guttmann may be the most consequential soccer coach you’ve never heard of. But if it weren’t for Guttmann, you may never have heard of Pelé.

And Brazil may never have become the greatest soccer-playing country on Earth.

That’s because Guttmann changed the shape of modern Brazilian soccer — and changed the sport forever — when he imported the revolutionary 4-2-4 system from Hungary to Sao Paulo in 1957. A year later, Brazil won the first of five World Cups and the *joga bonito* was born.

But what Guttmann

brought to Brazil isn’t nearly as interesting as how he got it there.

That’s just one of the fascinating stories in “The Beautiful Game ... The Untold Story,” the exhibit that will open the Holocaust Museum LA at the Goldrich Cultural Center, a \$70-million expansion that will double the size of the Pan Pacific Park museum’s campus to 70,000 square feet.

On Sunday, the exhibit will be open to the public for free from 10 a.m. to 5 p.m. The grand public opening will take place in August.

The show’s launch coincides with eight local World Cup matches, which kicked off with the United States’ 4-1 win over Paraguay on Friday at SoFi Stadium, and it

shines a light on the important but largely overlooked relationship between Jewish life and the global game, as well as how Jewish innovators like Guttmann shaped the modern rhythm, style and culture of the sport.

“It was in the same intellectual level as jazz, as art and everything modern and progressive,” journalist Alton Sander, who helped curate the exhibit, said of Jewish participation in European soccer in the years before World War II.

“The origin of the game and how it intersects with Jews and the Holocaust and the impact that these Jewish footballers and coaches had to shape the game and help popularize the sport is so [See **Museum**, A11]

Slow vote count rankles, but fixes are hard

Speeding up tallies is no easy task in a huge state that prioritizes access and security.

By GRACE TOOHEY

Over the last decade, California became a national leader in voter accessibility and security, expanding options for when and how ballots can be cast while also strengthening election safeguards.

But those reforms came at a cost: speed. And in a political climate where unsupported conspiracy claims about election fraud can run rampant on social media — pushed, at times, by top political leaders — some fear the slow vote count is becoming a liability.

Election outcomes in recent years have become more drawn out in California, most recently taking about a week to determine

the gubernatorial and Los Angeles mayoral candidates advancing to November’s election after hotly contested primaries. And in prior years, it’s taken even longer to determine tight U.S. House or state Senate seats.

That tradeoff — election accessibility and security over quick results — has long been defended as a by-product of California’s desire to make it as easy as possible to cast a ballot while ensuring accuracy and integrity, something backers say remains vital to a thriving democracy.

But some experts say the increasing backlash over the slow vote count sows distrust.

“We’ve allowed the long count to be normalized, ... but that doesn’t mean it’s normal,” said Kim Alexander, president of the nonpartisan California Voter Foundation, who has become an advocate for accelerating the state’s vote [See **Vote count**, A9]

Chipping away at migrant freedoms

Harsh rules, red tape part of a Trump shift in strategy that also hits those here legally.

By ANDREA CASTILLO

WASHINGTON — A year after the Trump administration kicked off its aggressive immigration enforcement tour with military-style raids across greater Los Angeles, federal officials have veered toward a less flashy but broader strategy: making immigrants’ lives harder so they will leave.

The changes range in scale and scope, from disqualifying immigrants from certain jobs to indefinitely pausing the processing of visa applications. They target those lawfully present as well as the undocumented.

Since President Trump’s second term began, the administration has used executive orders and federal regulations to chip away at services or benefits, such as work permits and small business loans, that immigrants could obtain in the past.

Now, immigrants are finding that freedoms — the ones that once made the U.S. a desirable place to start over — are disappearing. Many are retreating back into the shadows as they fear previously routine tasks, such as traveling across states, filing taxes and seeking medical care.

“The priority is to force people to leave the country or not come, regardless of legal status or really any other criteria,” said David Bier, immigration studies director at the Libertarian think [See **Immigration**, A10]

E-BIKES and e-motorcycles have been involved in crashes and police chases resulting in injury or death.

Teenagers on e-bikes cutting path of danger

By SALVADOR HERNANDEZ

Signs of the exploding popularity of e-bikes are everywhere.

Riders are showing up in massive groups at the beach, kids are popping wheelies on quiet residential roads and scores of others are showing up in emergency rooms with cuts, broken bones or worse.

An 81-year-old was allegedly killed in Lake Forest after a 14-year-old crashed into him after he was spotted doing wheelies. In Yorba Linda, a 12-year-old was critically injured while riding a modi-

fied e-motorcycle. In Ocean-side, a rider fled from police in a chase that reached speeds up to 50 mph, and in Huntington Beach a man was attacked after riding his scooter through a crowd of more than 100 young e-bike riders.

Now, with graduations underway and summer around the corner, police across the state are looking for ways to pump the brakes on dangerous e-bike riding.

“If these bikes are not treated with respect and care, it could be just as dangerous as handing over a firearm,” said Officer Brandon Pon, a collision investi- [See **E-bikes**, A8]
