UAE Presidential Court

UAE, SINGAPORE AIM TO STRENGTHEN BILATERAL TIES

- President His Highness Sheikh Mohamed Bin Zayed Al Nahyan yesterday welcomed Lawrence Wong, Prime Minister of Singapore, for talks aimed at further strengthening bilateral cooperation under the UAE-Singapore Comprehensive Partnership. The two sides explored opportunities to expand cooperation in areas including the economy, investment, education, advanced technology, artificial intelligence, innovation and renewable energy, in line with both nations' development priorities. They also discussed regional and international issues of mutual interest.

Dubai to change speed limits on 5 roads

Limits will increase on three roads, and reduce on two

DUBAI

BY ANUPAM VARMA
News and Business Editor

Speed limits on five key streets in Dubai are set to change starting November 1.

On Al Asayel Street, the limit will increase from 60 to 80km/h between Oud Metha Street and Al Meydan Street. On Al Mustaqbal Street, it will increase from 60 to 70km/h between Sheikh Rashid Street and Al Meydan Street, while on Latifa Bint Hamdan Street, the limit will increase from 60 to 70km/h between Sheikh Zayed Road and Al Khail Road.

Meanwhile, speed limits will be reduced on two streets in both directions. On Al Rebat Street, the limit will reduce from 100 to 90km/h between Marrakech Street and Sheikh Mohammed Bin Zayed Road. On Sheikh Sabah Al Ahmad Al Jaber Al Sabah Street, it will reduce from 80 to 70km/h between 2nd December Street and Khalid Bin Al Waleed Street.

Dubai's Roads and Transport Authority (RTA) will replace speed limit signs along the affected road sections in accordance with approved specifications and standards. Speed cameras will also be reprogrammed to reflect the adjusted limits.

Safety strategy

The speed limits were changed in coordination with Dubai Police, in line with the objectives of the Dubai Traffic Safety Strategy and the indicators of the 2025 action plan for evaluating road safety performance. These adjustments are based on the 2026 updates to the technical specifications of the Dubai Speed Management Manual.

Dubai now tracks drones, aerial activity

NEW SYSTEM ALSO HELPS ENSURE AIRLINES DEPART AND LAND SAFELY

DUBAI

BY SAJILA SASEENDRAN
Chief Reporter

Long before a drone strays into the path of a passenger jet, a round-the-clock, AI-powered digital system in Dubai is already monitoring the skies and ready to raise the alarm.

Real-time monitoring and alerts are now possible thanks to the Dubai Civil Aviation Monitoring System (DMS), a smart, integrated platform that helps identify potential violations that could threaten Dubai's civil aviation sector.

The system monitors advanced air mobility operations and other low-altitude activities, including drones, hot-air balloons, sky trackers, laser activities, fireworks, aircraft warning lights and skydiving, as well as planned air-taxi operations, within a single digital ecosystem. It also monitors construction activities, cranes, high-voltage power-line towers and telecommunications towers.

The project, developed by the Dubai Civil Aviation Authority (DCAA), recently won first place in the category of Best AI Innovation in Transport Award at the 14th Dubai Award for Sustainable Transport (DAST), organised by the Roads and Transport Authority (RTA).

Officials said the system helps ensure that airlines, including Dubai's Emirates and flydubai among others operating in the emirate, can depart and arrive safely, without pilots having to share the sky with unregulated drones and other players.

"It's a big risk for the aviation industry," Saeed Belhoul, Director of the DCAA's Information Technology Department, told *Gulf News*.

Growth of drone industry

Belhoul said the drone industry has grown rapidly over the past five years, and not around a single use. Government bodies, public entities and private companies all fly drones for different purposes, as do individuals who enjoy photography and videography.

DMS monitors Dubai's low-altitude airspace, from ground level up to where commercial operations begin. That upper limit varies from location to location. The aim is to keep drone activity and commercial flights safely separated at all times.

Belhoul also clarified where the system's remit ends. It helps up to a certain level against drones coming from outside the country, but military threats are handled by the country's defence systems, which are already tackling them as seen in the recent regional conflicts.
