JetBlue ready to spend \$1b on Terminal C

Promises a brighter, bigger, better experience for passengers at Logan

By Christopher Muther

GLOBE STAFF

JetBlue will embark on a billion-plus-dollar renovation of Logan Airport's Terminal C, transforming it from a low-slung, outdated facility to a light-filled grand hall similar to those in European airports.

The renovated space, approved Thursday by a Massport vote, will sport soaring ceilings, hexagonal skylights, newly configured seat-

ing, new gates, more shops and restaurants, and an exterior that will reposition planes, allowing them to take off and land more efficiently. Massport anticipates the renovation will last approximately five years.

"This is not about adding more gates," said Rich Davey, CEO of Massport. "This is really about bringing us a modern terminal that can handle our current passenger

flow. Part of the challenge we face is that the terminal was built for 1960s traffic. So whether it's the concessions, whether it's the restrooms, even the hold rooms, there isn't enough space to accommodate the size of aircraft today."

Terminal C is primarily used by JetBlue, as well as Aer Lingus, Cape Air, TAP, and Etihad. The renovation would not only improve the terminal's aesthetics but also increase its size from 220,000 square feet to 300,000 square feet. About 30 percent of Logan's passenger traffic passes through Terminal C,

and the space is woefully under-equipped to handle those numbers, according to Dan Gallagher, deputy executive director of aviation business, finance, and commercial programs at Massport.

"We're probably about a third of the size that we should be for the concessions based on the volume of passengers, and that leads to just less than ideal customer experience and actually impacts our revenue stream as well," Gallagher said. He added that the update would also enable the terminal to achieve

Wu vows action on street and bike safety

New details on fatal crash emerge; mourners gather for vigil on City Hall Plaza

The crash that killed Boston city worker and bike enthusiast Louisa Gag last week involved an 18-wheeler recycling truck that had maneuvered around a turning vehicle on busy Tremont Street and then continued on for at least a few blocks after the collision, according to two people familiar with the investigation.

The driver appears to have been heading east on Tremont Street shortly after 8 a.m. July 9, when it approached a vehicle that was turning left. At that point, the driver steered right to go around the car and collided with Gag, the two sources told the Globe.

Those details emerged as Mayor Michelle Wu on Thursday evening vowed to "accelerate" street safety projects after more than a year of criticism from advocates that she'd slow-walked bike infrastructure and other road improvements.

She also promised a "full analysis" of the street design in the area of the fatal crash and beyond.

"I can't stop thinking about Louisa. We owe Louisa more than our grief. We owe her action. We have to do better," a tearful Wu told a crowd of cycling advocates who had gathered for a vigil out-

The latest pre-wedding ritual: A course of GLP-1s

Brides and grooms, seeking a certain look, turn to weight-loss drugs

By Sarah Rahal

GLOBE STAFF

When Laura Patnaude stepped into her wedding gown for her first fitting last month, she asked her seamstress, "How much weight is too much to lose before the dress is in danger?"

"About 40 pounds," her seamstress responded.

Patnaude, a former beauty pageant contestant from Dover, N.H., had lost about 25 pounds after starting a GLP-1 medication last year. In August, she will elope to Paris

with her fiancé and then celebrate with family and friends in the dress this fall.

"I've always struggled with my weight," said Patnaude, 33. "I didn't think I would care about it, but there's a lot of pressure [because] these photos will last forever."

For generations, brides have searched for ways to slim down before walking down the aisle. There were juice cleanses, boot camps, and crash diets like Keto. Now, obesity specialists say GLP-1 medications such as Zepbound, Ozempic, and Wegovy have become the latest fad, but with one major difference

— they are prescription drugs that come with serious side effects.

Many couples, including grooms, admit they're jumping on board. A recent survey from Zola, an online wedding platform, found that 10 percent of couples planning 2026 weddings said they were taking a GLP-1 medication. Another 10 percent were considering it, and more than half of current users said their upcoming wedding helped motivate the decision. Four in 10 couples also said easier access to the drugs has in-

Yale pressed to follow Harvard's lead against Trump

By Michaela Towfighi

GLOBE STAFF

Brown University pledged to invest in the state's workforce. The University of Pennsylvania restricted transgender students' participation in sports. Columbia University agreed to pay a \$200 million fine and adopt a new definition of antisemitism.

Until recently, Yale University has been spared from the level of scrutiny the Trump administration has imposed on its Ivy League peers. Still, the administration has accused the Yale Medical School of discriminating against white and Asian students in admissions decisions and has additional investigations of Yale's law school and undergraduate college.

Yale's leaders have defended its admissions process but are currently negotiating behind closed doors to reach a voluntary resolution over all of the administration's investigations.

Revelation again delays report on reparations

By Kris Hooks and Mara Kardas-Nelson

GLOBE STAFF

A former Tufts University professor whose 2022 book on slavery was pulled by its publisher over alleged errors is also involved in a far-reaching assessment of possible reparations by the City of Boston that has been delayed numerous times in the last three years.

Kerri K. Greenidge and two other Tufts researchers were tapped in early 2024 to study the role Boston and Massachusetts played in the trans-Atlantic slave trade and its legacy from 1620 to 1940.

City officials said they only learned of the issues surrounding Greenidge last week when The New York Times published a story on the allegations made by other scholars. The news prompted Boston to again delay release of the report Greenidge had worked on as recently as October 2025, when she was placed on leave by Tufts.

That report, which spans the period from the early-17th century to the mid-20th century, will now first be thoroughly fact checked by multiple organizations before its release, the officials said.

In the meantime, the city said it will send a sec-
