Jenilee Crowley paused her cancer treatments and had a son, Archer. Now, she and her husband may try for another child.

DESPITE CANCER, THEY CAN STILL HOPE FOR CHILDREN

With more young patients, the growing field of oncofertility offers options

By Brianna Abbott
GLOBE CORRESPONDENT

Shortly after her wedding four years ago, Jenilee Crowley felt ready to start having kids. Then the 38-year-old found a lump in her breast that upended all her future plans.

Chemotherapy, radiation, and other cancer treatments come with a slew of side effects, including hormone changes and potential organ damage that can risk a person’s fertility.

But Crowley, who was diagnosed with stage one breast cancer in 2022, learned that she had options. After a double mastectomy to remove the cancer, Crowley started hormone therapy to help prevent it from returning. Then, under medical guidance

from her team at Dana-Farber Cancer Institute, she paused the treatment so that she and her husband could freeze embryos and try for a baby. Her son, Archer, is now four months old.

“He’s smiling, and I just got him to giggle the other day,” said Crowley, who is now 43 and lives in Falmouth, Maine. “The cancer diagnosis, honestly, it sounds so weird, only made it more special, and not taking for granted what we’ve been given.”

Younger people are being diagnosed with a range of cancers at growing rates, disrupting their lives and threatening their fertility. But new technologies, cancer doctors, and reproductive specialists are working together to give more patients a chance to have children post-treatment, in the growing

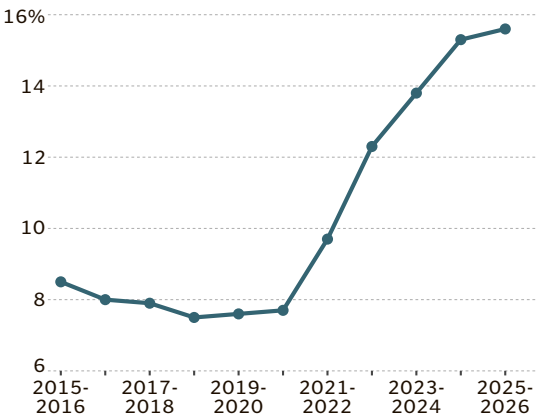

field known as oncofertility.

Bridging the fields of oncology and reproductive health, oncofertility is not so much an official medical specialty, but a term that reflects the growing recognition of the need to help younger cancer patients protect their ability to have children. The concept emerged around 2006, with the release of some of the first guidelines surrounding fertility preservation for cancer patients and the creation of the Oncofertility Consortium network, which provides support to survivors and those undergoing treatment.

The field has expanded, gaining momentum as more reproductive-age patients have been diagnosed and better treatments have

Admissions changes bring more Black students to Boston Latin School

By Marcela Rodrigues
GLOBE STAFF

Black student enrollment at Boston Latin School has more than doubled in the five years since an overhaul of the admissions process sought to increase diversity and make the prestigious exam school more broadly reflect the city it serves.

In the most recent academic year, Black students made up nearly 16 percent of enrollment, bringing the demo-

graphics of the school more closely in line with Boston, where just over 20 percent of residents are Black.

Five years ago, officials revamped the selection process at the city’s three exam schools to take into account socioeconomic factors. At the time, Black enrollment at Boston Latin School was less than 8 percent.

The city has also made it easier to take the entrance exam; instead of traveling to an-

other school on a Saturday, public school students can now take the test at their own school on a weekday.

“Changing when and how the test is administered can make a real difference in access even without any kind of explicit consideration of neighborhood or school in the admissions policy,” said Melanie Rucinski, a lecturer at the Harvard Graduate School of Education who studies selec-

Vet freed from jail in Russia after long ordeal

Mass. man had been reported near death; Trump, Putin reach deal

By Nick Stoico and Chloe Craft
GLOBE STAFF AND GLOBE CORRESPONDENT

Just days after his parents warned he was near death, a US Marine veteran from Lowell was freed by Russia on Tuesday after more than four years in custody, where he reportedly experienced severe abuse that left him in a near-catastrophic state.

Robert Gilman had been imprisoned since 2022 on charges of beating a Russian police officer, and over the past several months was in a hospital with a condition known as dissociative stupor, in which a person becomes unresponsive as a result of intense stress.

On Tuesday, President Trump said Russian President Vladimir Putin agreed to release Gilman on humanitarian grounds after the two leaders spoke. Trump said Russia received no concessions in return.

“We appreciate this decision, and the fact that Russia asked for no one in return — No exchange took place,” Trump said in a post on his Truth Social platform.

The president also posted a photo of Gilman appearing gaunt and draped in an American flag

This story may contain content readers find disturbing or triggering. For help with postpartum mood disorders, the National Maternal Mental Health Hotline is free, confidential, and 24/7. Text or call 1-833-TLC-MAMA. If you or someone you know is having thoughts of suicide, call 988 or go to 988lifeline.org to chat online.

PLYMOUTH — Just days before she killed her three children, Lindsay Clancy sent a flurry of messages to a psychiatric nurse practitioner, warning she had “intrusive thoughts” about suicide and feared they were caused by new medications, according to testimony Tuesday in Plymouth Superior Court

The nurse, Rebecca Jollotta, testified that she assured Clancy intrusive thoughts “are quite common” in women suffering from postpartum depression and anxiety. She said she adjusted her medications and told her it usually takes four to six weeks to feel “full clinical benefits.”

Now in its third week of testimony, the trial has featured an in-depth review of the mental health treatment Clancy received after giving birth. While she has admitted to killing the chil-

RICHARD D. PRICE 1952-2026

With his music, he elevated everyone

By Edward Fitzpatrick

EAST PROVIDENCE, R.I. — He will be remembered as a Berklee-trained trumpet player who toured the country with the Lionel Hampton and Count Basie orchestras and played at the White House twice.

And he will be remembered for a 30-year career as a Rhode Island music teacher in Portsmouth, Newport, and at Bishop Hendricken High School in Warwick.

But I will remember him for the stirring performances he delivered at less august events, including Providence Little League games and the quirky local race, the Grog and Dog Jog.

Richard D. “Ritchie” Price, of East Providence, R.I., died on July 24 from complications of kidney failure. He was 74. “Everyone just loved him,” said his son, Matthew Price. “He was everyone’s biggest cheerleader, no matter your interests. If you gave him an update on whatever you loved — even the smallest progression — he would react as if you had
