Dubai judge reveals key tenant rights

DUBAI
BY ASHFAQ AHMED
Managing Editor

The Rental Dispute Centre (RDC) in Dubai is empowering tenants with clear legal protections, on-line complaint filing, and remote hearings, ensuring that whether it's a rent increase, maintenance issue, or eviction threat, they can resolve disputes quickly and fairly.

In an exclusive interview with *Gulf News*, Dr Omar Bin Suwaidan Al Suwaidi, Senior First Instance Judge at the Rental Dispute Centre (RDC), spoke about tenants' rights, highlighted common rental disputes, and explained how the RDC operates. The aim is to inform residents, especially newcomers, about the legal protections and digital tools available to them when dealing with landlords.

1,335 agreements

Since the beginning of the year, the centre has completed 1,335 settlement agreements worth Dh231m, highlighting the growing importance of awareness among residents, especially newcomers.

Landlords are required to notify tenants 90 days before a contract ends if they intend to raise rent. If the tenant disagrees, they can file a complaint with the RDC, where the case is reviewed against the Dubai rental index. The RDC provides a streamlined complaint system, allowing tenants to submit disputes online without visiting the centre.

PRESIDENT MARKS FLAG DAY

President His Highness Shaikh Mohammad Bin Zayed Al Nahyan raises the flag at Qasr Al Hosn in Abu Dhabi to mark Flag Day, a national occasion that reflects the values of loyalty, unity, and pride in the country's identity and national spirit. The ceremony yesterday included the playing of the UAE national anthem and was attended by a group of retired Emirati service personnel in a gesture of appreciation for their lasting contributions to the nation's development over the years.

UAE calls for \$4 trillion energy push, rejects oil glut concerns

Minister: Energy systems of future can't depend on outdated infrastructure

ABU DHABI
BY ABDULLA RASHEED
Abu Dhabi Editor

The UAE's leading energy officials have urged greater global investment across all energy sectors, saying the world will require trillions of dollars annually to meet growing demand – even as they dismissed concerns about a potential oil glut next year.

At Adipee 2025, Dr Sultan Ahmed Al Jaber, Minister of Industry and Advanced Tech-

nology and Managing Director and Group CEO of Adnoc, said the world must mobilise over \$4 trillion in annual investment to ensure reliable, affordable, and sustainable energy.

Long-term demand growth

"The energy systems of the future cannot depend on electricity networks built on the infrastructure of the past," Dr Al Jaber said. "Long-term demand growth will continue across all forms of energy in all markets, and underinvestment today will create shortages tomorrow."

He outlined key pressures shaping the market, including rising global electricity use, a fourfold surge in data centre power consumption, and the doubling of the world's aircraft

fleet by 2040. Renewable capacity will more than double, he noted, while oil demand will remain above 100 million barrels per day beyond 2040.

Meanwhile, Suhail Mohammad Al Mazrouei, UAE Minister of Energy and Infrastructure, downplayed the risk of a supply glut following Opec+'s decision to pause output increases in early 2026. "I'm not going to talk about an oversupply scenario – I can't see that," Al Mazrouei said at the conference. "And I think all of what we are seeing is more demand." He added that long-term demand for energy – oil, gas, and renewables alike – will remain strong, and sustained investment will be essential to maintain supply security.

UAE fast-tracks certification for eVTOL aircraft

GCAA TO SOON CERTIFY MULTIPLE PASSENGER, CARGO AIR TAXI MODELS

DUBAI
BY JUSTIN VARGHESE
Your Money Editor

The UAE is accelerating plans to bring electric vertical take-off and landing (eVTOL) aircraft into commercial use, with the General Civil Aviation Authority (GCAA) fast-tracking certification for multiple passenger and cargo models.

The move positions the country at the forefront of global advanced air mobility, setting the groundwork for future air taxi and urban transport systems in line with the UAE's innovation-driven aviation strategy.

The GCAA said the certification programme follows a rigorous, evidence-based process that spans technical assessment, flight testing, and operational evaluation. Each project is being advanced on individual timelines based on readiness and compliance with safety and performance standards.

Safety and reliability

Saif Mohammad Al Suwaidi, Director-General of the GCAA, said the UAE remains among the first nations to establish a regulatory framework for next-generation air transport. "Our approach prioritises safety and reliability at every stage, ensuring innovation in aviation proceeds with the same discipline that defines our oversight system," he said.

Dedicated teams are now

The move positions the country at the forefront of global advanced air mobility, setting the groundwork for future air taxi and urban transport systems.

working on each eVTOL programme, bringing together technical, operational, and regulatory specialists from both UAE entities and international certification bodies. The aim is to integrate new air mobility technologies safely and efficiently into the national aviation ecosystem.

Aqeel Al Zarouni, Assistant Director-General of Aviation Safety Affairs, said the certification pathway is designed to enable innovation while maintaining full regulatory transparency. "We're building a structured and efficient process that supports technological advancement without compromising safety," he noted.

The GCAA underscored that all eVTOL aircraft under review are undergoing comprehensive testing in partnership with manufacturers to ensure full compliance with global aviation standards.

The announcement comes as the GCAA hosts the UAE Aviation Safety Conference 2025, themed "AI and the Future of Aviation Safety: Intelligent Skies, Safer Flights".
