How a freezing country embraced EVs

BY KARLA ADAM

FINNMARK, NORWAY — Just a few years ago, almost no one drove electric vehicles up here. In this remote region north of the Arctic Circle — where reindeer outnumber people, avalanches can bury roads in winter and sunlight disappears for weeks — “range anxiety” takes on a new meaning.

Today, however, nearly all new car sales in Norway are electric. That’s true even in Finnmark, the northernmost region in Europe’s northernmost country.

Norway is “an unlikely place for a transportation revolution,” acknowledged Christina Bu, head of the Norwegian Electric Vehicle Association.

At the Skoda dealership in Alta, Finnmark’s largest city, salesman Orjan Dragland marveled at the

What range anxiety? In Norway, thanks to government efforts, electric cars dominate.

TOP: Norway’s 60,000 miles of roads snake around fjords and through mountainous terrain. **ABOVE:** A taxi driver charges his car at a station in Alta. Last year, almost nine out of 10 new passenger cars sold in Norway were electric.

transformation — how five years ago, every car on the showroom floor had a combustion engine, and now the inventory is all EVs.

In 2024, nearly 90 percent of new passenger cars sold in Norway were fully electric. Of the cars sold last month, the EV share was 97 percent.

By comparison, EVs last year accounted for 8 percent of new car sales in the United States, 13 percent in the euro zone and 27 percent in China.

“What happened” in Norway? Dragland said. “The government happened.”

Norway has one of the world’s most ambitious climate targets. It is aiming to become carbon neutral by 2030, and cutting emissions from road traffic is an important part of that. While the push for EVs has played to people

Trump is cleared to end status for swath of migrants

HUNDREDS OF THOUSANDS MAY BE AT RISK

High court pauses Biden plan for those fleeing unrest

BY JUSTIN JOUVENAL, CHRISTINE ARMARIO AND MARIA SACCHETTI

A divided Supreme Court on Friday cleared the way — for now — for the Trump administration to revoke the provisional legal status of potentially hundreds of thousands of immigrants from Cuba, Haiti, Nicaragua and Venezuela who have been allowed to live and work in the United States while their immigration cases play out.

Officials said Friday’s decision on immigration parole could affect about 530,000 migrants, though many of them may have obtained another legal status in the United States. Cubans, for instance, are eligible to apply for

permanent residency and a path to citizenship under a 1966 federal law.

The decision is the second this month in which the high court has given Trump officials permission to terminate programs that protect immigrants fleeing countries racked by war or economic turmoil while litigation on those programs continues. The justices also allowed the administration to revoke temporary protections that allowed a different group of nearly 350,000 Venezuelans to

‘MAHA Report’ marred by AI garble, experts say

Invented studies, dead links and other markers discovered in citations

BY LAUREN WEBER AND CAITLIN GILBERT

Some of the citations that underpin the science in the White House’s sweeping “MAHA Report” appear to have been generated using artificial intelligence, resulting in numerous garbled scientific references and invented

studies, AI experts said Thursday.

Of the 522 footnotes to scientific research in an initial version of the report sent to The Washington Post, at least 37 appear multiple times, according to a review of the report by The Post. Other citations include the wrong author, and several studies cited by the extensive health report do not exist at all, a fact first reported by the online news outlet NOTUS on Thursday.

Some references include “oaicite” attached to URLs — a

After a protracted fight, Swift’s early recordings belong with her

BY EMILY YAHN AND SAMANTHA CHERY

After a highly publicized fight to own the master recordings of her first six albums, Taylor Swift has emerged triumphant: The pop megastar said Friday that she owns the entirety of her music catalogue, ending a years-long saga that gave new visibility to artists’ frequent struggles to ob-

Campaign to gain control of her songs highlighted artists’ business struggle

tain the full rights to their own work.

“I’ve been bursting into tears of joy at random intervals ever since

I found out that this is really happening. I really get to say these words: All of the music I’ve ever made... now belongs... to me,” Swift wrote in a long letter posted to her website. “To say this is my greatest dream come true is actually being pretty reserved about it.”

Swift, 35, credited the success of the Eras Tour, which earned a reported \$2 billion from 2023 to

2024 and became the highest-grossing concert tour in history, as well as the passionate support from her very loyal fan base, “for helping to reunite me with this art that I have dedicated my life to, but have never owned until now.” In addition to her masters, Swift said she now owns all of her music videos, concert films, album art and photos, and unreleased songs.

Swift’s battle to gain full control of her work has sparked numerous discussions in the music industry about artists’ rights since June 2019, when prominent artist manager Scooter Braun’s Ithaca Holdings company acquired the Nashville-based Big Machine Label Group. Braun, known for helping shape the careers of Justin Bieber, Ariana

Trump tells rally in Pa. he’s doubling steel tariffs

BY MARTINE POWERS

WEST MIFFLIN, PENNSYLVANIA — President Donald Trump made a series of promises on Friday to protect steelworkers in a proposed partnership of U.S. Steel and its Japanese rival Nippon Steel, including a doubling of tariffs on steel imports to 50 percent, a vow that the deal will stipulate no layoffs and a promise that every worker at the American company would get a \$5,000 bonus.

Trump said the higher tariff rate would “even further secure the steel industry in the United States.” The higher fees will take effect Wednesday, Trump said in a Truth Social post on Friday evening after the event.

“Nobody’s going to be able to steal your industry,” Trump told an audience of hundreds of steelworkers gathered inside a plant outside of Pittsburgh. “At 25 percent, they [foreign competitors] can sort of get over that fence. At 50 percent, they can no longer get over that fence.”

Trump’s new plans came a week after he first announced that he backed what he called a partnership between Nippon and U.S. Steel. Previously, a proposed merger was blocked by President Joe Biden due to con-

D.C. hosts WorldPride amid a new backdrop

Lower turnout expected, but those involved still hope for a big celebration

BY JOE HEIM, FRITZ HAHN, HANNAH SAMPSON AND SOPHIA SOLANO

The welcome signs for WorldPride, the world’s largest LGBTQ+ gathering, are out across Washington. Banners hang from lampposts along major roads. Rainbow stripes have been painted on bike lanes and sidewalks.

The message from the District to LGBTQ+ residents and visitors has been a cheery and unequivocal, “We want you here.” At a

Pride news conference Thursday, District Mayor Muriel E. Bowser proudly called the District “the gayest city in the world” and encouraged residents to fly Pride flags in front of their homes.

But for many in the LGBTQ+ community, the election of Donald Trump and his return to the presidency has altered the mood — and the outlook — for WorldPride.

Less than a year ago, city leaders, LGBTQ+ business owners and Pride organizers said they anticipated the event and its associated panels, parties and parades would bring up to 3 million people to D.C. They projected hotels at full capacity and a revenue bonanza that would more than justify the city’s \$5 million budget to prep for the festival,
