AI Royalty Comes to King Charles's Court

KINGLY CONCERNS: King Charles III met in Scotland on Thursday with top tech executives, including Nvidia's Jensen Huang, right. He urged that they adopt guidelines to keep artificial intelligence from going rogue following a series of alarming incidents. **A4**

Congress Heads Home Early As Contentious Issues Simmer

AI dangers, gas prices are left unaddressed while House turns focus to midterms

By MAYA DAVIS

WASHINGTON—House lawmakers are heading home until after the midterm elections, getting an early dismissal despite simmering concerns about high gasoline prices and the dangers of artificial intelligence—and criticism that Congress just isn't doing its job.

House Speaker Mike Johnson (R., La.) insisted that letting lawmakers go this week—rather than later this month—is the best path for Republican candidates in the final campaign stretch until November's general election.

Leaders had already called off two weeks of scheduled work this month, and on Wednesday said that was the last day, cutting planned votes on Thursday.

"Congress is not on recess," Johnson told reporters Tuesday. "Our members can be doing more and better work for their constituents and their districts over the next couple

weeks than here, just kind of running in circles."

Johnson said Wednesday, by his count, that the House has had its second most productive session since 1789, boasting of more than 900 bills passed while blaming the Senate for not getting them over the finish line. As of last week, 104 laws have been enacted in the current Congress, putting it on pace for fewer than any of its predecessors since the Civil War.

Earlier this month, Congress cleared a crucial short-term funding law, putting a possible shutdown past the

election. But House GOP lawmakers say the Senate, also led by Republicans, has held up major proposals including the SAVE America Act, a key Trump priority that would impose stricter voting rules. Johnson said if the Senate moved on legislation, he would bring his chamber "back with a 48 hours' notice, and we'll stay here indefinitely."

A Senate GOP aide called the criticism of the Senate laughable and said the House was leaving town early to avoid making members take

Red, Blue Voters Unite Against Flock Cameras

By LAURA J. NELSON AND KRIS MAHER

In the liberal Blue Ridge Mountain city of Asheville, N.C., progressives fear the Trump administration could use Flock Safety cameras to spy on political dissidents, transgender residents and undocumented immigrants.

In the foothills 95 miles south, Republicans in conservative Oconee County, S.C., view the same AI-enabled license-plate readers as a threat to constitutional privacy rights and have even read from the Federalist Papers aloud at tense public meetings.

Days apart, both communi-

ties recently voted to stop using Flock cameras. Though political opposites, they have landed on the same side of a fast-growing national backlash: a fight against government surveillance that has forged rare common ground in America.

"Government has got to be restrained," said Matthew Durham, the chair of the all-Republican Oconee County Council. "It's a 90-10 issue."

"Appalachian people don't trust the government for a lot of reasons," said Kim Roney, a progressive member of the blue Asheville city council.

Asheville has backed reparations for slavery, protested Im-

Samsung Fans Bent Out of Shape Over Apple's Foldable Phone

Galaxy users are indignant

about 'new' features they've used for years

By TIMOTHY W. MARTIN AND SOOYOUNG RHEE

Rasheed Richmond has owned several Samsung foldable phones. It's been a lonely existence.

He's typically the only non-iPhone user at work meetings and social gatherings. Worse still, people don't even recognize his device.

That stopped when Apple introduced the iPhone Duo, its first foldable phone.

Since then, Richmond's phone has been buzzing with a consistent refrain: "Now I understand why you have a fold-

able." The 48-year-old tech CEO in Los Angeles has tried to persuade people to try Samsung's version. Few are biting.

"They don't feel brave enough," he said.

Welcome to a day in the life of Samsung Nation, where the indignities never end.

The company and its followers have long chafed at their second-class status, and last week's iPhone unveiling reignited the resentments. "So far, so same," one of Samsung's social-media accounts said. Fans, tired of hearing about "new" features they've

One Phone Call Put Sheeran Tour at Risk

New England Patriots owner Robert Kraft isn't usually in the business of vetting supporting acts for concerts at his NFL team's home sta-

By Andrew Beaton, Katherine Sayre and Elias Leight

dium. But last week, when he caught wind that one of the artists booked to play Ed Sheeran's concert at Gillette Stadium was, in his view, using the tour to accuse Israel of committing genocide, Kraft decided he wouldn't remain on the sidelines.

Kraft, the 85-year-old billionaire, had a longstanding

relationship with Sheeran—the English musician even played at his wedding in 2022. Over the course of a 40-minute conversation, Kraft explained that he wouldn't host Macklemore, the outspoken American rapper, at his stadium.

More than that, several other National Football League owners were also ready to cancel Sheeran's dates as long as Macklemore remained on the bill.

By then, the tightknit circle of NFL owners whose hulking mega-venues host everything from sold-out concerts to World Cup games had drawn a line in the sand. David Tepper

The Math Geek Who Quit Anthropic

Jacob Coxon became the face of AI safety after dire warning

Over the past week, a global reckoning about the risks of artificial intelligence spread from the frontier labs of Silicon Valley to living

By Amrith Ramkumar, Erin Woo, Berber Jin and Ben Cohen

rooms across America and the corridors of power in Washington and Beijing.

And it all started with a guy nobody had ever heard of.

Until he publicly resigned from Anthropic and warned about the dangers of AI sys-

tems that could end humanity, Jacob Coxon was anonymous.

The 27-year-old British researcher was a talented math student who went to Cambridge, spent his young adulthood in a London intellectual community known as the "rationalists" and tried commodity trading before finding his way to Silicon Valley.

But he barely had an online footprint. He didn't strike friends as especially likely to
