UAE among 10 nations to meet climate deadline

190 COUNTRIES MISS KEY UN DATE FOR SUBMITTING NEW CLIMATE TARGETS

DUBAI
BY STEPHEN N. R.
Senior Associate Editor

The UAE was among just 10 nations worldwide to meet a key UN deadline for submitting new climate targets, as nearly all other countries — including major economies — failed to deliver their updated commitments on time.

Under the Paris Agreement, nearly 200 nations were required to submit enhanced plans by February 10 outlining how they would steepen emissions cuts by 2035. However, according to a UN database tracking submissions, only a handful met the deadline.

Most important of century

UN climate chief Simon Stiell has called these latest national pledges “the most important policy documents of this century”, but several top polluters — including China, India and the European Union — were absent from the list. Countries missing the deadline represent 83 per cent of global emissions and nearly 80 per cent of the world’s economy, according to Carbon Brief analysis.

The UAE, along with the US,

83%
of global emissions by countries which missed deadline

Britain, Brazil, Ecuador, Saint Lucia, New Zealand, Andorra, Switzerland, and Uruguay, was among the few to meet the deadline. Most G20 nations failed to submit their revised targets, raising concerns about a global backslide on climate action.

The US submission, however, remains largely symbolic, as it was made before President Donald Trump ordered Washington’s withdrawal from the Paris deal. There is no formal penalty for late submissions, but NDCs serve as an accountability measure, signalling governments’ commitment to tackling climate change.

Global emissions must nearly halve by 2030 to meet the targets set under the Paris Agreement. Last week, Stiell emphasised that all submissions must be made by September to allow proper assessment ahead of the COP30 climate summit in November.

■ His Highness Shaikh Mohammad Bin Rashid Al Maktoum, Vice-President and Prime Minister of the UAE, and Ruler of Dubai, accompanied by Shaikh Hamdan Bin Mohammad Bin Rashid Al Maktoum, Crown Prince of Dubai, Deputy Prime Minister and Minister of Defence of the UAE, and Chairman of Dubai Executive Council, is briefed on the future transportation system ‘Rail Bus’, during his inspection of the RTA’s platform at the World Governments Summit.

Dubai launches novel Rail Bus

Eco-friendly mode of transport will run on a bridge equipped with solar panels

DUBAI
BY SHARMILA DHAL
UAE Editor

The Dubai Roads and Transport Authority (RTA) yesterday launched the ‘Rail Bus’ at the World Governments Summit in Dubai.

The novel bus has an operational speed of 100kmph, the authority said.

The bus has a capacity of 40 passengers, it added.

A rail bus is a lightweight rail car meant to carry passengers on railway lines.

An innovative, eco-friendly transport mode, it offers a green, efficient and cost-effective alternative mode of transport to existing options.

Unique mode of travel

It was in January last year that RTA signed a memorandum of understanding with Rail Bus Inc from the US at the Dubai International Project Management Forum (DIPMF) to develop a rail bus system,

which travels on a bridge equipped with solar panels to generate the electricity needed to operate the system.

Abdul Mohsen Kalbat, CEO of the Rail Agency, RTA, said, “This transportation system features vehicles operating on a bridge outfitted with solar panels. These panels harness solar energy to power the system, ensuring its operation in Dubai. This system is distinguished by its contemporary design and offers the advantage of lower costs in comparison to similar transportation systems.”
