Democracy Dies in Darkness

SUNDAY, JUNE 29, 2025 • \$6

CAROLYN VAN HOUTEN/THE WASHINGTON POST

As U.S. cut aid, Sudan’s children starved

The 3-year-old boy darted between the mourners, his giggles rising above the soft cadence of condolences. Women with somber faces and bright scarves hugged his weeping mother, patting her shoulders as she stooped to pick up her remaining son. Marwan didn’t know yet that his twin brother was dead.

Omran shouldn’t have died, doctors said. The physician at his clinic outside the Sudanese capital said basic antibiotics probably would have cured his chest infection. The International Rescue Committee, which received a large amount of its funding from the United States, had been scheduled to deliver the medicines in February. Then the new U.S. administration froze foreign aid programs, and a stop-work order came down from Washington.

Preventable deaths piled up, doctors say, as USAID funds were frozen for months, with few other resources for the war-ravaged nation’s most vulnerable

BY KATHARINE HOURELD
IN QUAZ NAFISA, SUDAN

Liana Ashot Chuol, 7, and sister Reem receive aid at the Almanar feeding center in Khartoum, Sudan, on May 25.

Omran died at the end of May. As his health declined, his frantic mother had carried him in ever-widening circles to 11 health facilities. None had the medicine he needed.

“He was just in my arms whimpering, ‘I’m so sick, Mom,’” said 24-year-old Islam al Mubarak Ibrahim. “I was holding him and trying to comfort him, and I prayed to God to save him.”

Her boys were inseparable. Marwan thinks Omran is still in the hospital. “One day, I will just tell him, ‘Your brother went to Paradise,’” she said.

After more than two years of ferocious civil war, Sudan is home to the world’s largest humanitarian crisis, the United Nations says. Both sides have attacked hospitals.

Trump vows swift action to undo blocks on agenda

COURT RULING EMBOLDENS ADMINISTRATION

It will flex power on immigration, education, USAID

BY JUSTIN JOUVENAL,
CAT ZAKRZEWSKI
AND JEREMY ROEBUCK

An emboldened Trump administration plans to aggressively challenge blocks on the president’s top priorities, from immigration to education, following a major Supreme Court ruling that limits the power of federal judges to issue nationwide injunctions.

Government attorneys will press judges to pare back the dozens of sweeping rulings thwarting the president’s agenda “as soon as possible,” said a White House official who spoke on the condition of anonymity to describe internal deliberations.

Priorities for the administration include injunctions related to the Education Department and the U.S. DOGE Service, as well as an order halting the dismantling of the U.S. Agency for International Development (USAID), the official said, detailing efforts to implement plans

President Donald Trump announced Friday.

“Thanks to this decision, we can now promptly file to proceed with numerous policies that have been wrongly enjoined on a nationwide basis,” Trump said at a news conference, during which he thanked by name members of the conservative high court majority he helped build.

Trump on Friday cast the narrowing of judicial power as a

GOP on cusp of a sweeping reversal of U.S. clean energy

Tax bill would gut green incentives, add costs to existing renewable farms

BY EVAN HALPER
AND SHANNON OSAKA

Congressional Republicans are poised to reverse course on U.S. energy policy by wiping out hundreds of billions of dollars in incentives for solar and wind projects as well as for consumers seeking to purchase everything from energy-saving appliances to electric cars.

The Senate’s latest draft of the tax bill released overnight Friday contains strict green energy cutbacks that disappointed lobbyists for solar, wind and battery compa-

nies, who hoped senators would temper some of the House’s most draconian cuts. It also imposes a new tax on existing wind and solar farms if they include materials from a foreign entity like China — a huge blow for the renewables industry, which still incorporates many materials from China across its supply chain.

“They’re proposing an outright massacre with punishing new taxes on these industries,” Sen. Ron Wyden (D-Oregon) wrote in a statement on Saturday. He said Republicans added what amounts to a “death sentence” for green energy, with provisions added “in the middle of the night” Friday before voting was expected to start in the Senate.

White House to forgo deporting Abrego witness, a 3-time felon

BY MARIA SACCHETTI

The Trump administration has agreed to release from prison a three-time felon who drunkenly fired shots in a Texas community and spare him from deportation in exchange for his cooperation in the federal prosecution of Kilmar Abrego García, according to a review of court records and official testimony.

Jose Ramon Hernandez Reyes,

38, has been convicted of smuggling migrants and illegally reentering the United States after having been deported. He also pleaded guilty to “deadly conduct” in the Texas incident, and is now the government’s star witness in its case against Abrego.

The government illegally deported Abrego to a notorious megaprison in El Salvador in March, and stonewalled for

weeks after the Supreme Court ordered the Trump administration to facilitate his return to the United States. Officials flew the Maryland resident back into the country this month, but only after a grand jury had indicted him on charges of migrant smuggling, in part because of Hernandez’s testimony.

In court, prosecutors have identified their main witness as the “first cooperater.” But a fed-

eral agent also testified this month that the main cooperater owned the vehicle that Abrego was allegedly using to smuggle migrants when the Tennessee Highway Patrol stopped him in 2022. The Department of Homeland Security has identified Hernandez as the registered owner of the SUV Abrego was driving in that incident. That traffic stop is the centerpiece of the criminal

As entry-level jobs tighten, grads question degree’s value

Transition to work is bumpy for young people as companies retrench

BY TAYLOR TELFORD

Ever since she graduated a year ago with a degree in computer science, Maggie Chen, 23, has been searching for her first real job. The process has been grueling and impersonal, she said, involving a lot of ghosting and rejection, which at times has made her “a bit depressed and demotivated.”

Mostly, “looking on LinkedIn just makes me feel sad,” said Chen, who switched to computer science from biochemistry halfway through her undergraduate studies at the University of California at Davis after she got into computers early in the pandemic. Tech appealed to her because it seemed stable and full of opportunity — and because she wanted

to be done with school after completing her bachelor’s degree.

For Chen, a first-generation college student, the “guilt of being dependent” on her parents after graduation has been “very awful,” despite how supportive they are. They encouraged her to follow in the footsteps of friends who are pursuing more advanced degrees to better their chances on the job market, but she is wary about spending more time and money on school.

“Everybody tells you, ‘Just get a college degree and you’ll get a job and it’ll make things easier,’” Chen said. Now, “a master’s is the new bachelor’s, I guess.”

Chen is among the growing numbers of graduates facing a bumpy transition to professional life as they contend with one of the toughest job markets in years for people in their 20s. The unemployment rate for college graduates ages 22 to 27 jumped to 5.3 percent in the past six months ending in May, up from 4.4 percent for the same period a year

After Lahaina burned, experiment aims to fill housing gap

Hundreds of prefab homes are erected on state-owned land in what may become national model

MENGSHIN LIN/FOR THE WASHINGTON POST

Officials in February tour Ka La’i Ola, a 57-acre development in Maui with 450 structures that will house roughly 1,500 of the state’s most vulnerable after a fire two years ago devastated the area.

BY RACHEL SIEGEL

LAHAINA, HAWAII — The Matson shipping container had traveled 10,000 miles by the time it arrived on this Maui hillside. Inch by inch, a towering crane lifted a nearly 20,000 pound structure of galvanized steel and glass out of the container, the newest home in a town stricken by disaster.

Almost two years after wildfires ripped through Lahaina, this is where global supply chains, disaster relief and a novel solution to America’s housing crisis come together. On track for full occupancy this summer, the 57-acre development is part of Hawaii’s attempt to house some of its most vulnerable residents, using hundreds of prefab homes in a way that has never been tried elsewhere. It’s also a test of how quickly the government and private companies can work together to prop up housing when there are few options — and whether other places will do the same.
