THE COST OF IRAN WAR MOUNTS

Friends take pictures in Muscat, Oman, as vessels sit nearby because the Strait of Hormuz is effectively blockaded. The Pentagon is asking Congress for an additional \$80 billion to fund the war. **NATION, A5**

SENATE VOTES TO LIMIT TRUMP IN IRAN

In rare rebuke, the chamber joins House in approving war powers resolution.

By LISA MASCARO

WASHINGTON — The Senate for the first time approved a war powers resolution Tuesday seeking to block U.S. military action against Iran, as lawmakers warily watch President Trump's efforts to resolve a conflict that the administration launched on its own and now needs Congress to fund.

It was the 10th time the Senate has tried to stop the war, and the outcome, on a vote of 50 to 48, was a stunning turnaround from past efforts. Although the resolution is largely symbolic, and does not fully carry the force of law, it reflects the growing concerns from a number of Republican lawmakers in both the House and Senate over both the war and the deal Trump struck with Iran to end it. The House approved the resolution earlier this month.

"Time after time, the vast majority of Senate Republicans sided with Trump and his war instead of the American people," said Senate Democratic leader Chuck Schumer of New York.

Why data centers don't compute in California

Energy costs, regulations are built-in obstacles

By Blanca Begert

The nation is awash in data center hate and California is no exception.

Temporary bans have cropped up across the state as residents from Imperial County to San José fight proposals in their communities. Monterey Park became the first city in the country earlier this month to permanently ban data centers by a popular vote. And a recent poll sponsored by the environmental group Net-Zero California showed 70% of state residents don't want data centers in their communities.

But unlike in Virginia, Texas, Ohio and other states where residents are fighting 400-plus megawatt hyperscaler facilities in their backyards, California has some major barriers keeping data centers at bay.

Sky high industrial electricity prices are more than double the national average. Long wait times to connect to the grid have some new data centers sitting empty in Silicon Valley. And the state

regulates the size of the backup generators that keep the centers running when the grid goes down. That has limited most facilities to a fraction of the size that artificial intelligence increasingly demands.

That all means that California is seeing less of a boom — fewer proposed data centers, and smaller in size — than in the country's hot spots.

"California isn't even on the map today," said Mehdi Paryavi, chairman of the International Data Center Authority. "Taxes are high, land is expensive, water is scarce, energy is difficult to find, communities are pushing back. There are all kinds of problems."

Northern California and Southern California were hubs for an earlier generation of data centers. "But over time, as the sector has grown, the overwhelming majority has been developed elsewhere," said Andrew Batson, head of data center research at real [See Data, A7]

AI concerns hit tech stocks

Share prices of major players decline amid doubts that the huge spending will pay off.

By QUEENIE WONG

Tech stocks took another big hit Tuesday as investors sold off shares of companies that have powered the artificial intelligence boom.

Technology companies have been spending billions of dollars investing in data centers and infrastructure needed to support the race

to advance AI. But sky-high valuations and geopolitical tensions have some investors questioning whether massive AI spending will pay off, analysts said.

Reflecting the unease, the tech-heavy Nasdaq composite dropped roughly 2%. The Standard & Poor's 500, a stock market index that tracks the performance of the largest U.S. publicly traded companies, fell by more than 1%.

Share prices for major California tech companies, including Nvidia, Qualcomm, Intel and Marvell Technology all dropped.

Meta Platforms, Apple, and Google's parent company, Alphabet, also saw their stock prices slide, though the decline wasn't as large as the drop in chip stocks.

Shares of Micron Technology, a U.S. memory chip manufacturer, plunged by more than 13% a day before the company was scheduled to report its third-quarter financial results. Anxiety in the U.S. spilled over from Asia, where South Korean tech companies SK Hynix and Samsung Electronics, both major computer memory chip manufacturers, saw [See Tech, A11]

Voters to decide on new tax hike to boost LAFD

The increase in the fire-racked city would be the second in a year to hit consumers.

By DAVID ZAHNISER AND NOAH GOLDBERG

A new sales tax that would generate \$345 million annually for the Los Angeles Fire Department will go before voters this year, the City Council decided Tuesday, as a stubborn warehouse blaze burned for a seventh day on the city's eastern edge.

The council voted 14 to 0 to put the half-cent sales tax hike on the Nov. 3 ballot, with supporters saying the additional funds would go toward more firefighters, new fire stations and new equipment, such as fire trucks and helicopters.

The vote came nearly 18 months after the outbreak of the Palisades fire, which destroyed thousands of homes in Pacific Palisades, Malibu and other coastal areas, leaving 12 people dead. But it more immediately coincided with the city's fight to extinguish the blaze at the Boyle Heights cold storage facility, which has spread smoke across the region over the last week.

The campaign for the sales tax hike is being spearheaded by United Firefighters of Los Angeles City Local 112, the union that represents nearly 3,400 firefighters. Appearing before the council, union leaders

pointed to the Boyle Heights fire as the latest sign that the city needs more money for emergency response.

"This is our plan to undo decades of underinvestment in the department," said Ryan Quigley, a 23-year firefighter-paramedic who also serves as the union's secretary.

Mayor Karen Bass, through a spokesperson, said she is grateful to the union for bringing the tax proposal forward.

The mayor "has championed this measure from the very beginning," the spokesperson, Paige Sterling, said in a statement.

The firefighters union began gathering signatures for the tax this year, submitting them to the city clerk last month. Since then, backers have voiced confidence that it would pass, given the growing concern across the city about urban wildfires.

Still, the path to victory could be complicated by recent events.

Last month, Los Angeles County voters narrowly passed a different half-cent sales tax hike that's expected to raise \$1 billion annually to pay for healthcare. That measure, which received just above the 50% needed for passage, pushed the tax rate within the city of Los Angeles to 10.25 cents for every dollar of spending.

If voters approve the fire tax increase as well, the rate will jump to 10.75 cents per dollar.

Fire draws scrutiny to warehouse firm

Officials are probing Boyle Heights blaze and Lineage, which has a blemished past.

By ALEX WIGGLESWORTH

With a fire burning at a Boyle Heights cold storage warehouse for a seventh straight day, scrutiny is growing over the operator of the massive facility and what sparked the blaze that has spewed bad air across the region.

State regulators have launched an investigation into the incident and some local officials have called it a wake-up call for communities such as Boyle Heights, where homes are sandwiched close to industry and manufacturing districts.

Lineage, previously known as Lineage Logistics, the company operating the warehouse, is billed as the world's largest owner of cold storage facilities and raised \$4.44 billion in its U.S. initial public offering in 2024, the largest stock market debut of the year. It has been cited for regulatory violations and hazardous chemical releases at some of its facilities, according to enforcement records and a civil lawsuit, though the company said it has a strong safety record.

Lineage said in a statement that the cold food storage industry is heavily regulated and that various agencies conducted more than

200 routine regulatory inspections of its North America operations in 2024 and 2025 alone. Its total incident rate — a metric that measures the frequency of workplace injuries and illnesses — outperforms the industry average by 14%, the company said.

"The health and safety of our employees and the communities we serve is our top priority," it said.

The company said it believes the fire was started when a subcontractor employed by the owner of the rooftop solar array, Altus Power, was performing tests on June 17. Fire officials have also said they suspect the fire started on the roof.

Altus Power said in a statement that the cause of the fire has yet to be determined but that it is cooperating fully with authorities and has reached out to local leaders to offer help. The contractor, Pearce Services, confirmed that four of its employees were on-site the day the fire ignited and said none were injured. The company is also cooperating with relevant agencies, it said in a statement.

The California Division of Occupational Safety and Health has opened inspections with both Lineage and Pearce related to the fire, the agency confirmed.

Los Angeles City Controller Kenneth Mejia said his office is also tracking the related city costs for dealing with the fire, adding on X that "we need all companies [See Fire, A6]

Chávez still looms over L.A.

The murals of the disgraced UFW leader along his Eastside street have much to say about hero worship

RONALDO BOLAÑOS Los Angeles Times

CÉSAR CHÁVEZ waves a United Farm Workers flag and cradles four figures outside a Boyle Heights shop.

I wasn't sure what to expect when I went to check out the César Chávez murals on the Eastside avenue that bears his name.

The thoroughfare is a celebrated showcase for public art, and Chávez was a favored mural subject in Mexican American communities for decades after his death in 1994. But according to a bombshell New York Times investigation in March, Chávez sexually abused minors. Since then, other revelations have further tarnished the legacy of the Chicano labor and civil rights leader long considered a secular saint.

Communities soon removed statues and busts of him and scrubbed his name from streets, parks and schools. California lawmakers rebranded César Chávez Day, a state holiday, as [See Arellano, A8]
